## DEPOPULATION ALERT: Shocking new study reveals covid vaccine TERMINATES 4 out of 5 pregnancies via "spontaneous abortions"

SITUATION UPDATE JULY 1<sup>ST</sup>, 2021

**COVID VACCINE TERMINATES  
4 OUT OF 5 PREGNANCIES**

Briteon.com

A shocking new study published in the New England Journal of Medicine reveals that when pregnant women are given covid vaccinations during their first or second trimesters, they suffer **an 82% spontaneous abortion rate**, killing 4 out of 5 unborn babies. This stunning finding, explained below, is self-evident from the data published in a new study entitled, "**Preliminary Findings of mRNA Covid-19 Vaccine Safety in Pregnant Persons.**" Just as disturbing as the data is the fact that the study authors apparently **sought to deliberately obfuscate the truth about vaccines causing spontaneous abortions** by obfuscating numbers in their own calculations. Originally brought to our attention by a Life Site News article, we checked with our own science contacts to review the data and double check all the math. In doing so, we were able to confirm two things:

1. Yes, the study shows an 82% rate of spontaneous abortions in expectant mothers given covid vaccines during their first or second trimesters.
2. Yes, the study authors either deliberately sought to hide this fact with dishonest obfuscation (explained below) or they are incompetent and made a glaring error that brings into question their credibility.

In other words, this study was almost certainly a *cover-up* to try to claim vaccinating pregnant women is perfectly safe. But the study data actually show quite the opposite. Here's how:

### **700 of the 827 women were vaccinated in the third trimester**

Table 4 from the study, shown below, reveals that a total of 827 pregnant women were studied. Out of the 827 women, 700 of them received their first vaccine in their third trimester of pregnancy. This means 127 women (which is 827 - 700) received a vaccine during their first or second trimesters. (You have to read the fine print below the table to see this disclosure.)

**Table 4. Pregnancy Loss and Neonatal Outcomes in Published Studies and V-safe Pregnancy Registry Participants.**

Participant-Reported Outcome	Published Incidence*	V-safe Pregnancy Registry†
	%	no./total no. (%)
Pregnancy loss among participants with a completed pregnancy		
Spontaneous abortion: <20 wk <sup>15-17</sup>	10-26	104/827 (12.6)‡
Stillbirth: ≥ 20 wk <sup>18-20</sup>	<1	1/725 (0.1)§
Neonatal outcome among live-born infants		
Preterm birth: <37 wk <sup>21,22</sup>	8-15	60/636 (9.4)¶
Small size for gestational age <sup>23,24  </sup>	3.5	23/724 (3.2)
Congenital anomalies <sup>25**</sup>	3	16/724 (2.2)
Neonatal death <sup>26††</sup>	<1	0/724

\* The populations from which these rates are derived are not matched to the current study population for age, race and ethnic group, or other demographic and clinical factors.

† Data on pregnancy loss are based on 827 participants in the v-safe pregnancy registry who received an mRNA Covid-19 vaccine (BNT162b2 [Pfizer-BioNTech] or mRNA-1273 [Moderna]) from December 14, 2020, to February 28, 2021, and who reported a completed pregnancy. A total of 700 participants (84.6%) received their first eligible dose in the third trimester. Data on neonatal outcomes are based on 724 live-born infants, including 12 sets of multiples.

Out of the 127 women receiving vaccines during their first or second trimesters, **104 spontaneous abortions** occurred before their pregnancies hit the 20-week mark. These are indicated as "spontaneous abortions" in the table. In simple math, 104 spontaneous abortions (during the first 20 weeks) out of 127 women who received vaccines in their first or second trimesters calculates to an **82% rate of spontaneous abortions** among these pregnant women who were vaccinated. It is important to note that **deaths of unborn babies during the third trimester are known as "stillbirths" and not spontaneous abortions**. Thus, the spontaneous abortions could not have possibly occurred in women vaccinated during their third trimester, by definition. Thus, the study authors dishonestly used the wrong denominator of 827 in their "spontaneous abortions" calculation, when they should have used a denominator of 127, which is the number of women receiving vaccines during their first or second trimesters. Put another way, it is impossible for a woman who was vaccinated for the first time during her *third* trimester to have a "spontaneous abortion" in the first 20 weeks, since they weren't vaccinated during the first 20 weeks (and pregnant women aren't time travelers). Thus, those women shouldn't be included in the denominator used to calculate the spontaneous abortion rate. The authors of this study should receive an award in the category of, "How to lie with statistics," because they apparently tried to pull a sleight-of-hand trick to make it appear that vaccines are safe for pregnant women. In reality, they seem to be killing more than 4 out of 5 unborn babies in the first 20 weeks of gestation, at least in this data set. (It's a small set of 127 pregnant women, so we'd like to see a larger review of many thousands of pregnancies in order to get a more clear picture.)

## Apples and oranges, lemons and limes

A simple way to explain this with a metaphor is to imagine a bag of 50 lemons and 50 limes, with a science study asking the question, "What percentage of lemons are yellow?" The scientists count all the yellow fruit and reach the number 50. They mistakenly divide 50 into 100 because there are 100 total piece of fruit, then they declare, "50% of lemons are yellow" because it's 50/100. But the other 50 pieces of fruit can't possibly be included because they're limes, not lemons. So the correct math is 50/50, which means 100% of the lemons are yellow. That's the correct

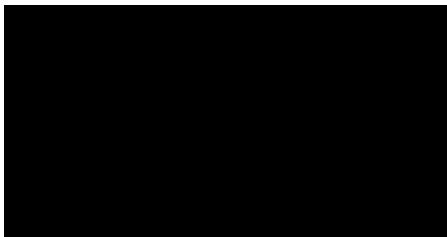

answer. In this science paper, they are using 827 as the denominator, even when 700 out of those 827 women were only vaccinated in the third trimester, which is *long past* the time window during which a "spontaneous abortion" can occur. And since pregnant women aren't time travelers, they can't go back in time and report a spontaneous abortion from months earlier. If vaccine scientists either can't do this basic math -- or are willfully deceiving the world with dishonest obfuscation of the numbers -- then "science" has already failed its core promise: to offer "evidence-based" conclusions to understand the world around us. Yet when 4 out of 5 pregnant women lose their babies in the first 20 weeks, these scientists falsely claim the spontaneous abortion rate is only 12.6%. Why? Because **they're covering up the atrocities of the vaccine** for political reasons, most likely. In fact, the key author of the study, Tom T. Shimabukuro, is also **named in numerous other studies** that claim to document adverse reactions in various vaccines, ranging from rotavirus vaccines to the H1N1 vaccine from 2009. It raises the obvious question: Did Shimabukuro make the same error in other studies that concluded vaccines posed no significant risk of adverse events? For example, here's another study he co-authored: "**Adverse events after Fluzone® Intradermal vaccine reported to the Vaccine Adverse Event Reporting System (VAERS), 2011-2013.**" That study concluded, "Review of VAERS reports did not identify any new or unexpected safety concerns after TIV-ID." But is that conclusion based on bad math, like the study on covid vaccines given to pregnant women? **We call for a review of all his methods and conclusions.** Perhaps this same study architect has made the same systematic error (or possibly a deliberate obfuscation) for many years, spanning many previous studies. It wouldn't be the first time one author was found to have made systematic mistakes across dozens of papers and is forced to retract them. And isn't that what the "scientific method" demands? Peer review. Double checking the math. Admitting to mistakes in conclusions. This is how science progresses, by pointing out errors and demanding they be addressed and corrected. We can't just accept bad math and call it "science" when the bad math doesn't check out.

## **Spike protein injections into pregnant women an "atrocious," warns Dr. Peter McCullough**

In the mean time, it's clear that **4 out of 5 pregnancies are being terminated by covid vaccines** when those vaccines are given during the first 20 weeks (at least, according to the small data set we have so far). And that means the "depopulation" aspects of the covid vaccine are working exactly as globalists hoped they would. Remember: **Bio-distribution studies (pharmacokinetics) show that covid vaccine spike proteins directly attack reproductive organs such as the ovaries.** Given that spike proteins are engineered biological weapons designed to interfere with human cells, it should be no surprise whatsoever that they are achieving a high rate of spontaneous abortions in pregnant women. I recently interviewed Dr. Peter McCullough, an internal medicine expert and editor of two medical journals. Although he does not characterize this as a depopulation agenda, he agrees that these vaccines are attacking pregnant women and causing more than 80% of unborn babies to be aborted. He calls it an "atrocious" and says the pushing of these vaccines on pregnant women is "shameful." You can hear him in his own words in the following interview: [Brighteon.com/fc2aa0fe-eae0-4c32-bc23-47e6b6ab9d97](https://www.brighteon.com/fc2aa0fe-eae0-4c32-bc23-47e6b6ab9d97)

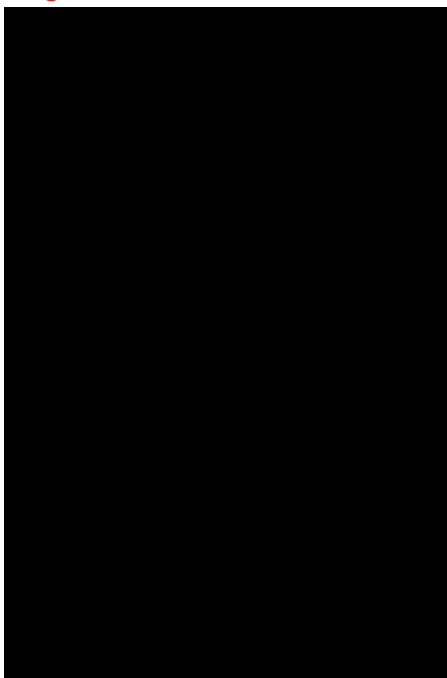

Dr. Peter McCullough warns: Covid vaccinations of

**FINE GROUND PINK HIMALAYAN SALT AT THE BRIGHT**

All this means that **live births may plummet by 3.2 million over the next year, in the USA alone**, if every pregnant woman is vaccinated during the first 20 weeks of pregnancy. The number of unborn babies being murdered in the womb, in this case, is reaching "holocaust" levels, which is why this is being called a medical "atrocitiy." The fields of medicine and science have turned against humanity. They are now killing babies by the millions and injecting adults with spike protein bioweapons that are causing strokes, heart attacks, deaths and lifelong injury. **The vaccine industry is at war with the human race.** And live-born babies are their enemy. **Joe Biden's land management czar once characterized human children as an "environmental hazard."** This is a war. A bioweapons attack. And it goes beyond mere "crimes against humanity." It is a spiritual betrayal of the entire human race by the institutions of science and medicine, both of which long pretended to be motivated by a desire to aid humanity, but are now clearly shown to be working towards humanity's destruction. ## Canadese arts test zijn gevaccineerde patiënten: 62% heeft nu al bloedpropjes

*'De gevaccineerden gaan hier gegarandeerd last van krijgen'*

Een Duitse arts die onlangs zijn gevaccineerde patiënten aan een veelgebruikte standaard bloedtest onderwierp, schrok zich een hoedje [toen hij ontdekte dat bij 30% tot 40% van hen reeds bloedpropjes beginnen te vormen](#) (trombose). De Canadese arts dr. Charles Hoffe heeft nu hetzelfde gedaan met zijn patiënten, en kwam op een nog veel hoger percentage uit: **62%**. Ook deze arts zegt dat het 'onvermijdelijk' is dat de mensen die zich laten injecteren met de experimentele Covid 'vaccins', hier vroeg of laat – en gezien de nu al torenhoge percentages is 'vroeg' véél waarschijnlijker – last van zullen krijgen. De [Duitse immunoloog professor Sucharit Bhakdi](#) wees er onlangs op dat het is vastgesteld dat 5% van alle mensen die trombose krijgen, overlijden. Dat zou betekenen dat op iedere 1 miljoen gevaccineerden er minstens 31.000 hieraan zullen sterven, en vermoedelijk nog vele malen meer als dr. Hoffes conclusies correct zijn.

Hoffes patiënten kregen de mRNA 'vaccins' van Pfizer of Moderna, die ook in Nederland het vaakst worden geïnjecteerd en het menselijke lichaam 'programmeren' om biljoenen spike eiwitten aan te maken. AstraZeneca is in veel landen reeds geschrapt vanwege het enorme aantal (ernstige) bijwerkingen en tegenreacties. Het [hartverscheurende relaas van de 28 jarige Lisette Verhoeven](#), die twee dagen vóór het stoppen van het AZ vaccin in Nederland toch deze fatale injectie kreeg en nu ernstig ziek en gehandicapt is, werd al door honderdduizenden mensen bekeken ([BLCKBX TV](#)).

Pfizer en Moderna 'klanten' lijken er echter bepaald niet beter af te komen, zeker niet op de middellange termijn (1 tot 3 jaar). Dr. Hoffe onderwierp zijn patiënten aan D-dimer testen, en ontdekte tot zijn ontzetting dat 62% nu al last heeft van bloedpropjes vorming. 'Het meest alarmerende is dat er sommige delen in het lichaam zijn, zoals de hersenen, het ruggenmerg, het hart en de longen, die niet kunnen regenereren. Als die weefsels worden beschadigd door bloedpropjes, is die schade permanent.'

### **75% van het vaccin verspreidt zich door het lichaam**

'We weten nu dat slechts 25% van het 'vaccin' dat wordt geïnjecteerd in de arm blijft,' legde hij uit. 'De andere 75% wordt opgenomen door uw lymfeklieren, en letterlijk aan uw (bloed)circulatie gevoed, zodat deze kleine pakketjes mRNA (*zich naar bijna al uw organen verspreiden, ook uw hersenen*). In één dosis Moderna zitten 40 biljoen mRNA moleculen.'

De producenten beweerden dat deze mRNA pakketjes direct in de menselijke cellen zouden worden opgenomen. De realiteit is echter dat de enige plek waar ze kunnen worden opgenomen in de bloedvatwanden en haarvaatjes is. Daar stroomt het bloed langzaam, en daar worden de genetische instructies vrijgegeven.

'Dan gaat je lichaam aan het werk deze (instructies) te lezen, en gaat het biljoenen en biljoenen van deze spike proteïnen aanmaken.' Tal van wetenschappers – waaronder [de Nederlandse professor en immunoloog Pierre Capel](#) – waarschuwden al bijna een jaar dat dit zou gaan gebeuren, maar werden door politiek en media vervolgens afgeserveerd als 'complotdenkers' en 'wappies'. Ze blijken nu echter dubbel en dwars gelijk te hebben gekregen.

Het lichaam ziet de spikes vervolgens als vijandige indringers, en gaat er antilichamen tegen maken, zodat je 'beschermd' zou zijn tegen Covid-19. Althans, dat is het idee, dat is het verkooppraatje dat er maandenlang via de media werd ingepompt. Tot nu toe is van die 'beschermende werking' echter geen enkel hard bewijs geleverd, maar lijkt eerder een omgekeerde trend in gang te zijn gezet. Een [Britse](#)

[minister gaf voor BBC Breakfast zelfs toe dat juist gevaccineerden nu veel kwetsbaarder zijn geworden voor corona \(wat dat 'corona' dan ook moge zijn\).](#)

### **Bloedpropjes bij gevaccineerden 'gegarandeerd'**

Die biljoenen spikes gaan zich in en tegen de bloedvatwanden klonteren. De bloedvaten behoren inwendig glad te zijn, zodat het bloed er makkelijk door kan stromen. Nu kunnen er op iedere willekeurige plek in het lichaam kleine 'spike' stukjes omhoog gaan steken. Bloedplaatjes zullen proberen de spikes weg te krijgen, waardoor een ophoping ontstaat die op zeker moment – soms heel langzaam, soms heel snel – op een bloedpropje kan uitlopen.

'Het is daarom voorspelbaar dat deze spike proteïnen bloedpropjes veroorzaken. Ze zitten in je bloedvaten (*als u tenminste bent geïnjecteerd*), dus dit gebeurt gegarandeerd,' waarschuwde Hoffe. Vormen die propjes zich in bijvoorbeeld je arm, dan kan je lichaam dat mogelijk nog tijdig opruimen voordat je daar veel last van krijgt. Maar ontstaan er bloedpropjes in je hart of hersenen – in een recente Nature Neuroscience studie werd [aangetoond dat de spikes zich naar alle delen van de hersenen kunnen verspreiden](#) – , dan kan het heel snel over en uit zijn. (1)

Iedere overheid die *daadwerkelijk* de gezondheid van het volk op het oog heeft, zou nu onmiddellijk stoppen met deze experimentele injecties, die in slechts enkele maanden tijd alleen al in het Westen onnoemelijk veel mensenlevens hebben verwoest, en – indien de bovenstaande percentages maatgevend zijn voor de hele bevolking – op het punt lijken te staan om op ongekende schaal dood en verderf te zaaien. En dat voor de veronderstelde bestrijding van een twijfelachtig 'novel virus' dat, *als je er al ziek van wordt*, een vastgestelde overlevingskans van 99,85% heeft (en 99,95% als je nog geen 70 bent).

# Doctor: Heart Failure From mRNA Jabs “Will Kill Most People”

*Published on July 10, 2021*

Written by John O'Sullivan

Dr Charles Hoffe MD, in his latest update of July 6, 2021 is reporting on the disturbing findings in his patients. He says the mRNA vaccines are plugging up thousands of tiny capillaries in the blood of those who took the 'vaccine.' Most will die in a few short years from heart failure.

The spike proteins injected, which are designed to be mass produced in the bodies of the vaccinated, are the cause of the clotting, which is having adverse effects on no fewer than 60 percent of people injected.

[Dr Hoffe](#), who practices medicine at Lytton BC Canada explains:

  
"We now know that only 25 percent of the 'vaccine' injected into a person's arm actually stays in your arm. The other 75 percent is collected by your lymphatic system and literally fed into your circulation so these little packages of messenger RNA, and by the way in a single dose of Moderna 'vaccine' there are literally 40 trillion mRNA molecules. These packages are designed to be absorbed into your cells. But the only place they can be absorbed is around your blood vessels and the place where they are absorbed is the capillary networks – the tiniest blood vessels where the blood flow slows right down and where the genes are released. Your body then gets to work reading and then manufacturing trillions and trillions of these spike proteins. Each gene can produce many, many spike proteins. The body then recognises these are foreign bodies so it makes antibodies against it so you are then protected against COVID. That's the idea."

But here's where the problem comes. In a coronavirus that spike protein becomes part of the viral capsule. In other words it becomes part of the cell wall around the virus. But it is not in a virus. It is in your cells. So it becomes part of the cell wall of your vascular endothelium.

This means that these cells which line your blood vessels, which are supposed to be smooth so that your blood flows smoothly now have these little spikey bits sticking out.

Dr Hoffe continues:

 *“So it is absolutely inevitable that blood clots will form because your blood platelets circulate round your blood vessels, and the purpose of blood platelets is to identify damaged vessels and stop bleeding. So, when the platelet comes through the capillary it suddenly hits all these COVID spikes and it becomes absolutely inevitable that blood clots will form to block that vessel.”*

*Therefore, these spike proteins can predictably cause blood clots. They are in your blood vessels (if mRNA ‘vaccinated’) so it is guaranteed. Dr Bahrdi then said to me that the way to prove this is to do a blood test called a D-dimer blood test.*

*“The blood clots we hear about which the media claim are very rare are the big blood clots which are the ones that cause strokes and show up on CT scans, MRI, etc. The clots I’m talking about are microscopic and too small to find on any scan. They can thus only be detected using the D-dimer test.”*

Dr Hoffe explains he has been performing D-dimer tests on his mRNA ‘vaccinated’ patients and he has worryingly identified that 62 percent of them had these microscopic blood clots.

*“These people have no idea they are even having these microscopic blood clots. The most alarming part of this is that there are some parts of the body like the brain, spinal cord, heart and lungs which cannot re-generate. When those tissues are damaged by blood clots they are permanently damaged.”*

The result, says Dr Hoffe, is that these patients have what is termed Reduced Effort Tolerance (RET) which means they get out of breath much easily than they used to. It is because the blood vessels in their lungs are now blocked up. In turn, this causes the heart to need to work harder to try to keep up against a much greater resistance trying to get the blood through your lungs.

This is called pulmonary artery hypertension – high blood pressure in the lungs because the blood simply cannot get through effectively. People with this condition usually die of heart failure within a few short years.

In conclusion, Dr Hoffe lamented:

***“These Shots Are Causing Huge Damage And The Worst Is Yet To Come.”***

very interesting article and deeply concerning. one issue that i have and if anyone medical out there can explain to me is that why are only 62% of the patients have the microscopic blood clots under the D- dimer test. what about the other 38% are they more resilient to the effects of the jab or will they also develop the blood clots later on  
if anyone has any thoughts that would be great

[Reply](#)

July 10, 2021 at 4:36 pm | #

Well, people vary. A favorite quote of mine from Rene Dubois is that each human is " unique, unprecedented, and unrepeatable." I don't know whether a d-dimmer test can localize where clots are forming, or whether some types of intramuscular injections show a (temporary ?) rise in d-dimmers. This has to be examined more.

A possibly unrelated topic. If you watch television you will see endless needle jabs in the upper arms (as part of the "you gotta get the vaccine!" PR). I was trained to always first pull back on the plunger a little after inserting the needle to see if you were in a blood vessel otherwise you could be giving an intravenous rather than an intramuscular injection. No one seems to be doing this.

July 14, 2021 at 10:49 pm | <#>

Hello Winni:

If all the sims don't get their boosters then their graphene oxide will become depleted as it destroys all of their antioxidants. Got to keep the G.O. pumping through the system.

[↩ Reply](#)

**Ogmios**

July 10, 2021 at 6:07 pm | #

An obvious answer would be differences would arise due to factors such as age and general health, neither is mentioned. There are also numerous reports of people 'accidentally' being given a saline solution instead of the kill shot. Who knows the true numbers?

What would have been useful is the results of tests on those who have not had the experimental treatment as the probability is the result would not be zero though hopefully not 62%.

[↩ Reply](#)

**Barry Paul Robinson**

July 11, 2021 at 6:31 am | #

I tend to agree, the dramatic impact of the first jab may have slowed them down and a lot of the second jabs were placebo as they are desperate to get as many as possible before people wake up, the booster could be the jab to reveal more facts.

[↩ Reply](#)

**Mike**

July 14, 2021 at 11:15 am | #

Maybe some shots are placebos

If they give out 100 % mRNA vaccines the awakening would probably too fast

[↩ Reply](#)

**Mark Tapley**

July 10, 2021 at 4:32 pm | #

How would anyone believe that an injection would not flow throughout the whole system? I believe the alleged spike protein attachment to the cells is unproven and the problems may be more related to the Graphene Oxide that has been discovered to make up over 99% of the Pfizer injection (the others will be the same thing).

People should have known long ago that the so called vaccines are just part of the Zionist eugenicist program of debilitation, sterilization and depopulation. I repost the findings on graphine oxide Itsme posted yesterday on PSI.

My questions are – How long do the genetically modified cells continue to produce the spike proteins, and how long does it take for the body to break down the spike proteins?

I could only find 1 small study to address this. The study says that there is no detectable spike proteins in the blood after 29 days. If this is correct, then the risk may be short term rather than long term. These are really important question, does anyone have any further solid information?

July 11, 2021 at 1:30 am | <#>

Hi Dr. J H,

As you said — too small a study and i'd add with a disclaimer regarding the interpretation of some unknown unknowns. Taken in consideration of funding by the Gates foundation — quite a combination — anyone versed well enough in the Game Theory? (I, for myself would give it a validity of near zero; but who am I?)

Cheers, JaKo

I had the initial jab – AZ. Since then I've been out of breath but not laboured breathing. More unfit I think. I'm a young 50 physically and mentally.

The injection site first gave me cellulitis and then ate away at my muscle and I'm now left with a crater. Yes, a crater in that arm where muscle once sat. Drs wouldn't note so I yellow ticketed myself.

I now have covid and have been in bed 5 days but feeling better every day.

Question if anyone can answer is why am I left with a crater

**Brian Trappler**

July 12, 2021 at 8:57 am | #

As is well documented, the “shot” contains polyethylene Glycol and other adjunctives, including graphites which act as micro-satellite receptor particles. You might well have suffered a heightened autoimmune inflammatory reaction at the injection site. I would recommend that you find a reputable Academic Dermatologist who can biopsy that crater and send you a Pathological Report.

Wonderful article John. As you know me, I am 91 and in the best of health. Against my better judgment I had the Pfizer jab NO 1, but have since resisted having jab 2. I am in the best of health in spite of having an indwelling catheter. My wife however at 86 never gets a night's sleep, cannot walk upstairs without losing breath, but believes all the party line from Big Pharma. It is a money making racket, pure and simple. And as to nose bags, they cause Hypoxia.

Hi Anthony.

I, with assistance from my Wife, did a microscopic analysis on a Freebie NHS paper face nappy from a Local NHS Hospital and got Clear video evidence that it's fibres concealed Graphine Oxide Nanoworms: <https://brandnewtube.com/v/tk5GGW> .

So, as already Confirmed with the Nasopharygeal PCR Swabs and also, the COVID-19 "Injections", I can only conclude, that we are being de-humanised and Experimented on, for the sake of the 500,000,000 Cyborgs they want to keep around as Slaves, to the best of my understanding?

I really want to be Wrong and have it turned into a movie

All the best, Anthony. I hope things work out fine for you both.

I have practiced shivambu. amaroli, & urine therapy for over a decade. I snort last night's urine, about a teaspoon, in the morning, along with a massage of it standing in my spa. It really helped with smoke inhalation damage from the California fires. I have no breathing problem now!

5 people that I know who have gotten the “jab”, including my mother in-law, are complaining of EXACTLY this problem. My mother in-law has a history of issues with blood clots, and ever since the “jab” (which she was adamant to get, despite warnings from her Dr.) has been in and out of the hospital suffering from more blood clots and even a few minor strokes. I suspect she hasn’t much time left on this earth now. I WARNED THEM!

I’ve tried warning my friends and family but to no good ends.

Now my sister’s partner (he’s just 64 years young) now has heart problems (not evident before he had a 2nd injection), and my cousin’s husband (1st injection) is having lots of problems with bloodclots, severe headaches and breathing problems. He was hospitalized for 2 weeks but now back at home with a heart monitor strapped on and weekly visits from a nurse.

I’ve been contacted by my doctor *many* times about getting the injection. My answer is always no. This doctor’s rationale for me to have it is basically peer and social pressure mixed with some emotional blackmail. My consistent reply is if that is all he has to offer for me to make an ‘informed choice’ then I believe he is trying to scare me into it, and later I added that he was delinquent in his duty to supply facts upon which I can base my *‘informed choice’*.

He next changed tactic and tried to get me informed by quoting a retracted medical research paper. He got very bad tempered when I informed him that he was quoting a retracted paper.

“How do you know this?” he demanded, I told him to look on retractionwatch.com and the COVID pages therein. He’s not called back for the last 2 weeks.

Here’s the page he should look at often — <https://retractionwatch.com/retracted-coronavirus-covid-19-papers/>

*The foundations of the bogus Covid narrative are crumbling. The novel recipe of lockdowns, masks, fear campaigns and lots of stickers turns out not only to entail horrific collateral damage, but to worsen Covid outcomes. An edifice of lies has been sustained by ruthless censorship, media blankets, and extensive conflicts of interest at our institutions of public health and science. As the lies are exposed, we stand at a crucial junction in history. Down one road lies a painful repeat lesson from history—that technocratic centralisation and surveillance deliver only stasis and gross inequality. Down the other lies an opportunity to cast off the yokes of woke critical theory, concentration of power and safety culture, and to reassert the generativity afforded only by personal agency, freedom of expression, decentralization and an evolutionary approach to knowledge and economy.*

**Bold New Book PANDEMIC BLUNDER – FAUCI AND PUBLIC HEALTH BLOCKED EARLY HOME COVID TREATMENT**  
by Joel S. Hirschhorn

A huge amount of data and information not covered by mainstream media are in Pandemic Blunder that tells the story of how over 500,000 Americans have died from COVID-19 unnecessarily because the government has blocked early home/outpatient treatment and prevention. With over 600,000 COVID American deaths, learning

about safe and effective treatment is more important than ever.

 About the Book: Pandemic Blunder contains considerable medical information and data to support a number of proven safe, cheap generic medicines and protocols that knock out the coronavirus when given early. Read about the pioneering, courageous doctors who have been using innovative approaches to prevent their COVID patients from needing hospital care and facing death. The book includes many expert opinions and Real World Evidence from doctors that show 70 to 80 percent of COVID deaths could have been prevented—and still can be. Don't be victimized by disinformation and propaganda. Learn how corrupt forces are aiming to make billions of dollars from expensive medicines and vaccines, and how hundreds of thousands of deaths could have—and should have—been prevented! Detailed information is given to help people protect their lives by using simple prevention protocols, an alternative to vaccines.

**Als u kunt bewijzen dat de NIH en de WHO hun behandelrichtlijnen goed hebben gevolgd, kunt u \$ 2 miljoen winnen**

Steve Kirsch 24 mei 2021

<https://trialsitenews.com/if-you-can-prove-that-the-nih-and-who-got-their-treatment-guidelines-right-you-could-win-2m/>

*Dit is het tweede in een reeks artikelen waarin wordt betoogd dat het gehoorzamen aan beperkende evidence-based medicine (EBM) behandelprotocollen bij een pandemie een onnodig verlies van honderdduizenden levens veroorzaakt.*

In mijn vorige artikel liet ik zien dat [de huidige behandelrichtlijnen van de NIH en de WHO voor fluvoxamine en ivermectine](#) helemaal niet kloppen met het bewijs . Een FOR-aanbeveling voor beide geneesmiddelen past bijna perfect bij alle gegevens.

In dit artikel zal ik iedereen duidelijk maken dat hun aanbevelingen zo onverdedigbaar zijn dat geen enkele in aanmerking komende enabler (zie onderstaande lijst) naar voren kan komen om deze aanbevelingen te ondersteunen, zelfs als ik hen een stimulans van een miljoen dollar bied om dit te doen.

Elk medicijnprotocol dat wordt gebruikt om COVID vroegtijdig te behandelen, moet in een van de drie categorieën vallen:

1. nuttig,
2. neutrale,
3. of schadelijk.

Ik beweer dat er gedurende ten minste de afgelopen 7 maanden overvloedig bewijs op tafel is geweest, allemaal in het volle zicht, dat zowel fluvoxamine als ivermectine, wanneer ze vroeg in een effectieve dosis worden gegeven, nuttig zijn omdat een NUTTIGE hypothese bijna perfect past bij alle bewijs en dat de andere twee alternatieven, neutraal of schadelijk, helemaal niet bij het bewijs passen.

---

Om de prijs van \$ 1 miljoen te winnen, hoeft u alleen maar een overtuigend argument te geven dat de aanbevelingen van de NIH of WHO NEUTRAAL en TEGEN over fluvoxamine of ivermectine (bestaande op 21 mei 2021 wanneer ik dit aanbod doe) zijn:

1. **meer waarschijnlijk passen bij het bewijs** dan aanbevelingen VOOR deze medicijnen, of
2. **meer kans om meer levens te redden** dan het aanbevelen van VOOR deze medicijnen.

Elke bewijsmethode is prima: passen bij de feiten of superieure kosten-batenverhouding. Je hebt twee volledig onafhankelijke manieren om elke prijs te winnen. Wat is er makkelijker?

In wezen is mijn wedstrijd de belichaming van het [voorzorgsprincipe van de geneeskunde](#) en gebruik ik [al het beschikbare bewijsmateriaal](#). Het niet gebruiken van deze degelijke benaderingen heeft geleid tot het onnodige verlies van het leven van miljoenen mensen. Voor mondkapjes hanteren wij het voorzorgsprincipe. Waarom gebruiken we het niet voor veilige, hergebruikte medicijnen?

Om in aanmerking te komen voor de prijs, moet je een van de sleutelfiguren van de mythe zijn:

1. Een professor aan een geaccrediteerde instelling voor hoger onderwijs waar ook ter wereld
  2. Een gediplomeerd arts overal ter wereld
  3. Een redacteur van een peer-reviewed medisch tijdschrift
  4. Het uitvoerend management van [Frontiers](#)
  5. Een medewerker van de NIH of WHO
  6. Een lid van de reguliere media overal ter wereld (vooral in Brazilië, waar ze geloven dat alle vroege behandelingen niet werken), inclusief kranten en online,
  7. Een gekozen functionaris waar ook ter wereld
  8. Een volksgezondheidsfunctionaris waar ook ter wereld
  9. Elke werknemer bij YouTube die verantwoordelijk is voor het [belachelijke YouTube-beleid dat video's verbiedt die beweren dat ivermectine een effectieve](#)
-

10. Een werknemer van een sociaal netwerk (inclusief YouTube) die beslissingsbevoegdheid heeft voor het censureren van inhoud, het opschorten van accounts en het verbieden van groepen met betrekking tot ivermectine of fluvoxamine
11. Een factchecker in elk land ter wereld, vooral Wikipedia-editors die inhoud verwijderen die zegt dat ivermectine werkt

U moet er ook mee instemmen dat uw inzending openbaar wordt gemaakt, inclusief uw naam, aangezien dit een zaak van groot openbaar belang is. Ik verzoek u ook om te controleren of uw werk correct is voordat u het indient. Adrian Hernandez bijvoorbeeld, een jaar lang een openlijke tegenstander van ivermectine, heeft onlangs in [eigen beheer een artikel gepubliceerd waaruit blijkt dat ivermectine niet werkte](#). De auteurs maakten één klein foutje: ze [transponeerden de controle- en ivermectinegetallen uit de Niaee-studie](#) waarschijnlijk in de hoop dat niemand het zou merken. Er staan mensenlevens op het spel; als uw inzending dergelijke fouten bevat, wordt u gediskwalificeerd. Je krijgt maar één toegangspoging per persoon.

The first person to submit a winning entry wins the prize, i.e. there will not be more than one winner per drug: \$1M for ivermectin, \$1M for fluvoxamine. To enter, submit your entry to the comments below. If I believe you met the challenge, you win INSTANTLY. If you want to appeal my decision, I agree we will go to JAMS where the loser will pay the fee (we'll both put the fee as a deposit). This discourages frivolous entries and is a drop in the bucket compared to the \$2M you stand to win if you think you are right.

The entries must consider the [23 early treatment studies of ivermectin](#) and the [two studies of fluvoxamine](#) including the symptom data from the Seftel study. Post your entry in the comments for all to see. I probably won't even have to respond as other readers will tear your analysis to shreds and make a mockery of you and your attempt. Public peer review.

I am not worried about losing \$2M. This is an impossible task because all but one of these studies is positive and the only negative study had a p value of .526 (which is basically no confidence whatsoever and would be tossed from any serious analysis since the p-value was so insignificant and the effect size was computed by algorithm and not directly measured). The evidence also shows that the earlier these drugs are given in adequate dosages, the greater the positive effect. If the drugs are neutral or harmful, that's impossible, a fact that seems to be lost on our experts from the WHO and NIH.

---

---

The [evidence today is simply impossible to ignore](#). Cases in Delhi, where Ivermectin was begun on April 20, dropped from 28,395 to just 2,260 on May 22. This represents an astounding 92% drop. Likewise, cases in Uttar Pradesh have dropped from 37,944 on April 24 to 5,964 on May 22 – a decline of 84%. If it wasn't the ivermectin, then why aren't the NIH and WHO all over this to find the real cause so they can let the entire world know? They aren't investigating because they know the cause: the adoption of ivermectin. They do nothing and say nothing. It's frustrating. More importantly, it's costing lives because doctors in many parts of the world including Brazil and Tamil Nadu continue to blindly follow the WHO advice.

The purpose of this challenge is two fold:

1. To draw worldwide attention to the fact that **none of the enablers of the NIH and WHO are able to credibly defend the indefensible recommendations of the NIH and WHO for these drugs even if offered a huge monetary incentive to do so**
2. To show that the current recommendations of these two organizations for these two drugs **have cost the unnecessary loss of life of hundreds of thousands of people.**

If you qualify and would like to submit an entry, please message me on TrialSiteNews or DM me on twitter.

The reason these absurd recommendations even exist is because the NIH and WHO insist on ignoring any evidence that is not a high quality phase 3 clinical trial published in a peer reviewed journal. Thus, in their view, all these drugs do nothing and since there is no benefit, there is no reason to recommend the drug. This is completely outdated thinking that is inappropriate in a pandemic. They totally ignore the cost of death.

If they were smart, they would look at [all available evidence](#) and choose the hypothesis about each drug which is the closest match to all the observed evidence and maximizes the number of lives saved. Because they did not do that, we are left with the inescapable conclusion that they aren't very smart and that their recommendations for these drugs should be ignored. QED.

Finally, why are Dr. Anthony Fauci and Dr. Francis Collins still remaining silent about the NIH guidelines for these two drugs? If a computer entrepreneur from Silicon Valley can figure all this out 7 months ago that it's virtually impossible for these two drugs not to work, why can't the NIH leadership? And apparently everyone agrees with me since there are no entries

---

with me since there are no entities.

We are also left to wonder why, when David Seftel confirmed the 100% success rate in the original fluvoxamine RCT published in JAMA with a real-world study also with 100% effect size, why did they just ignore it like it never happened? Why didn't they send a team to investigate if there were any biases or confounders? Instead, they just sat back and did nothing when the news came out. There was no investigation. There wasn't even a phone call or email to the investigator. Even after [60 Minutes did a story on this miracle at the racetrack](#), they still did nothing to investigate. They could have saved hundreds of thousands of lives if they had acted earlier on the evidence that was hiding in plain sight for at least the past 7 months.

Did you ever see the movie *Contagion*? That was fictional, but that was a very serious virus that was very contagious and deadly. If we are as inept with evidence on that one as we are on this one, we will be all dead.

Lastly, to support my claim that this evidence has been in plain sight for over 7 months and that it was clear that the data supported action by the medical community, I offer a simple example that I am intimately familiar with: my own personal efforts to get the world's attention to both of these drugs. For example, on October 17, 2020, I [wrote about both fluvoxamine and ivermectin in a very long article on Medium — a 23-minute read](#). This was followed with an email to *Elemental* entitled "Two drugs that can dramatically reduce the hospitalization and death rate from COVID-19... perhaps to zero" and included a link to my article. However, because these recommendations were counter to the recommendations of the NIH and WHO, my *Medium* account was suspended for life.

And finally, if they got it wrong on ivermectin and fluvoxamine, do you think they might also have got it wrong about other drugs such as hydroxychloroquine, vitamin D, zinc, and other [early treatments](#) too? Of course they did. See [Do the NIH and WHO COVID treatment recommendations need to be fixed?](#) and [Good Science Saves Lives, Bad Science Has Ruined Lives](#) for the evidence of this. Or read this excellent article in *Wired* about [The 60-Year-Old Scientific Screwup That Helped Covid Kill](#) which documents how the WHO ignores expert opinion that disagrees with their narrative.

**The sooner these recommendations are changed, the better.** The drugs have been sitting on the shelf the whole time. The data has been available to the public for over 6 months. What we lack are leaders with the ability to clearly see the evidence that is hiding in plain sight. The NIH and WHO should **either take my money or they should change their guidelines**. Lives are at stake. What will they actually do? Answer: Absolutely nothing. And Congress is supporting this. It's really very sad.

*Steve Kirsch is a high-tech serial entrepreneur based in Silicon Valley. He has been a medical philanthropist for more than 20 years. When the pandemic started, he left his day job at M10 and started the [COVID-19 Early Treatment Fund \(CETF\)](#) which funds researchers from all over the world running outpatient clinical trials on repurposed drugs. CETF funded David Boulware's trials on hydroxychloroquine and the Phase 2 and Phase 3 fluvoxamine trials, among many other research projects. He was recently featured on [60 Minutes](#) which highlighted his work with fluvoxamine. He has no conflicts of interest; his objective is to help save lives. In 2003, [Hillary Clinton](#) presented him with a [National Caring Award](#). He wrote this article to share some of what he has learned over the past year about the failure of evidence-based medicine during a pandemic in the hopes that people will realize their mistakes and change their views.*

*Note that views expressed in this opinion article are the writer's and not necessarily those of TrialSite, Inc.*

## De snelste vaccinatiedood ooit?

zaterdag, 10 juli 2021 20:33 Hits: 7440

**Vaccineren, vaccineren, vaccineren is het persoonlijke motto van Hugo de Jonge, de man die als geen ander vaccins weet te verkopen aan het grote publiek.**

Hoeveel doden dit heeft veroorzaakt is niet te achterhalen, want zelden vallen mensen letterlijk dood neer na een vaccinatie, maar soms gebeurt dat toch.

Voor wat waarschijnlijk de snelste dood na een coronavaccin is tot nu toe, gaan we naar Pakistan. ‘

Mr. Malik Imtiaz Mahmood, een hoge politiefunctionaris uit de stad Khushab, meende dat hij het goede voorbeeld moest geven door zich voor de camera te laten vaccineren (<http://www.thetruthseeker.co.uk/?p=237873>).

Men is streng in Pakistan, want een vaccin weigeren is er niet bij. Doe je dat toch dat loop je in sommige delen van het land de kans dat je mobiele of smartphone wordt afgesloten. Op andere plaatsen kan je wel eens je loon niet krijgen als je een vaccin hebt geweigerd en er zijn 70 militairen op non-actief gezet die weigerden om de levensreddende prik te nemen.

Dus een mooie gelegenheid voor Malik Mahmood om pontificaal op de foto te gaan.

Na de vaccinatie gaat Mahmood weer aan het werk, maar dat is van korte duur.

Zoals je in de volgende video kunt zien (rechts in beeld), stort hij nadat hij is gevaccineerd aan een hartaanval neer en sterft ter plekke.

## SP investigation Malik Imtiaz Mahmood died of a heart attack w...

Zoals gebruikelijk in onze hedendaagse propaganda maatschappij sterft deze man dan niet aan de gevolgen van de vaccinatie, maar aan de gevolgen van een onfortuinlijke hartaanval. (<https://thenamal.com/featured/khushab-sp-investigation-imtiaz-malik-dies-of-heart-attack-in-front-of-camera/>)

Niet duidelijk is welk vaccin Mahmood heeft gekregen, maar dat maakt ook niet zoveel uit, want ze zijn allemaal experimenteel en allemaal gevaarlijk.

Slechts enkele weken geleden stond de teller voor de Europese doden als gevolg van coronavaccinaties op 13.867.

Dit is de nieuwe score. (<https://healthimpactnews.com/2021/17503-dead-1-7-million-injured-50-serious-reported-in-european-unions-database-of-adverse-drug-reactions-for-covid-19-shots/>)

**COVID-19 Vaccine Adverse Drug Reactions**  
**17,503 DEAD**  
**1,687,527 Injuries Through July 03, 2021**  
 COVID-19 MRNA VACCINE MODERNA (CX-024414)  
 COVID-19 MRNA VACCINE PFIZER-BIONTECH  
 COVID-19 VACCINE ASTRAZENECA (CHADOX1 NCOV-19)  
 COVID-19 VACCINE JANSSEN (AD26.COV2.S)

EUROPEAN MEDICINES AGENCY  
 SCIENCE MEDICINES HEALTH

EudraVigilance

Bovenstaande cijfers zijn nog maar het topje van de ijsberg. In deze cijfers zijn niet meegeteld al die ouderen die in verzorgingshuizen zijn overleden direct na de vaccinaties.

Zoals de doden in een verzorgingshuis in Beverwijk: (<https://mail.niburu.co/binnenland/16088-vaccinatie-dodenhuis-in-beverwijk-negeerde-waarschuwingen>)

Nu komt er een bericht naar buiten waarin ze toegeven dat er inmiddels 31 bewoners zijn overleden (<https://www.nhnieuws.nl/nieuws/282343/tragedie-in-zorgcentrum-leidt-tot-ongeloof-verdriet-en-vragen-31-bewoners-overleden>). In totaal waren er 170 bewoners en als 31 daarvan na de vaccinaties zijn overleden, dan is dat bijna een vijfde van alle bewoners (20%).

Ondertussen doet de propaganda goed z'n werk en zijn de mensen die snappen dat ze ver uit de buurt moeten blijven van een vaccin de boosdoener in de ogen van een groot deel van de bevolking.

We willen daarom iedereen aanraden om nog eens goed de waarschuwingen van professor Bhakdi en Dr. Charles Hoffe ter harte te nemen voor het geval je alsnog overweegt om je te laten vaccineren.
